Omnipod® 5 System for iPhone
TestFlight Instructions for Android/Controller Users

Thank you for taking part in the Pilot Program to use a Dexcom G7 Sensor with the Omnipod 5 App for iPhone. At present, the Omnipod 5 iPhone App is only available to use with Dexcom G6. To use Dexcom G7, you need to download the Omnipod 5 App using a unique method, which involves the TestFlight app. Once the Omnipod 5 App has been downloaded, you will need to go through first-time setup again. This means that you will lose your data and restart adaptivity.

What is TestFlight?

Think of TestFlight as an early access version of the Apple App Store. It's a platform for downloading apps that are not yet publicly available, and it was created by Apple for this purpose.

Note: While TestFlight will work on iOS 14.0 and above, the **Omnipod 5 App requires iOS 17.2.** Update your phone to iOS 17.2 prior to downloading the Omnipod 5 App for iPhone.
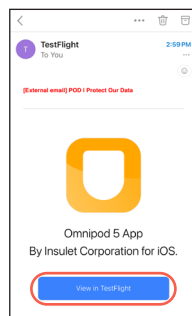

Downloading TestFlight

Note: Before you download the new Omnipod 5 App in TestFlight, make sure you **remove any previous TestFlight versions of the Omnipod 5 App** on your phone indicated by the yellow dot next to the name. **Do NOT delete the App Store version of the Omnipod 5 App for iPhone!**

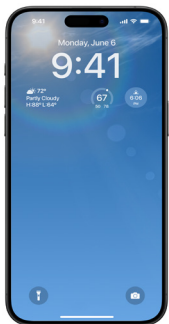

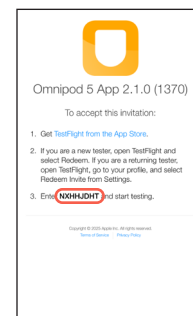

For the following steps, you **must use the iPhone** you plan to use with the Omnipod 5 App with!

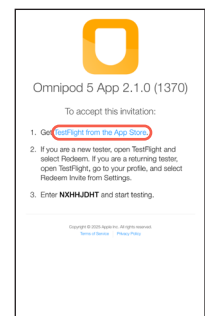

You'll receive a personalized TestFlight invitation via email.

In the email, tap **View in TestFlight.** Your device's browser will open.

Write down the **Redeem Code**. You'll need to enter it later.

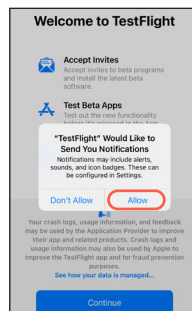

Tap **Get TestFlight from the App Store**.

You'll be redirected to the Apple App Store. Tap the **download icon**.

Once TestFlight has finished downloading, tap **Open**.

You'll be prompted to allow notifications. We recommend enabling them. Tap **Allow**.

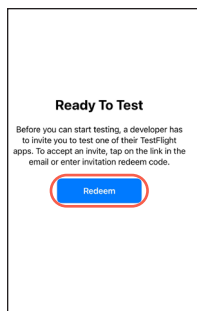

Carefully read TestFlight's terms and conditions. You must accept them to use the Omnipod 5 App. Tap **Continue**.

Redeeming the invitation and installing the Omnipod 5 App for iPhone

Ready To Test

Before you can start testing, a developer has to invite you to test one of their TestFlight apps. To accept an invite, tap on the link in the email or enter invitation redeem code.

From the Developer

Omnipod 5 App
Version 2.1.0 (1372)
Expires in 90 days

What to Test

Scheduled Protected build
Built from: https://bamboo.insulet.com/browse/OP5I-OOBWMD-PB-25
XCode configuration: Release
XCode schema: PhoneControlApp-Production
Git branch: release/internal
Git commit used: cbdddfe64b7f5051a85dc321e9d4cf5cf24eedd9
Base Url: horizoncloud-qa.apps.omnipodapi.com
ZShield Enabled: True

Next

After you've accepted Testflight's Terms and Conditions, you will see this screen. Tap Redeem.

If you have tested an app on TestFlight before, you will need to tap on your profile in the top right corner and tap **Redeem Invite.**
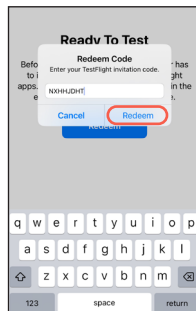

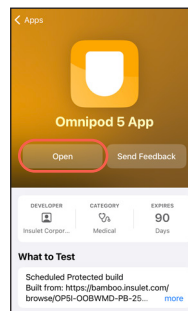

Enter the **Redeem Code** you wrote down earlier.
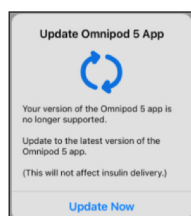

Tap **Redeem**.

Tap **Install**.

Once the Omnipod 5 App for iPhone has finished installing, tap **Open**.

If prompted to allow Bluetooth, Notifications, and Critical Alerts tap **Allow**.

Then tap **Next.** You will now go through first-time setup to start insulin therapy.

Updating the Omnipod 5 App for iPhone during the Pilot Program

Update Omnipod 5 App

Your version of the Omnipod 5 app is no longer supported.

Update to the latest version of the Omnipod 5 app.

(This will not affect insulin delivery.)

Update Now

If the Omnipod 5 App for iPhone needs to be updated, you'll receive a notification to **Update Now.**

It is important that you use TestFlight to do the update. **Avoid uninstalling and reinstalling the app**.

Uninstalling the app will result in the loss of your settings, and you will have to complete the first-time setup again!

For additional assistance, contact Product Support at 1-800-591-3455 Option 1.
